

Authentication and security
solutions you can trust.™

Features

-  User Friendly
-  Efficient & Flexible
-  Secure Communication
-  Self Service Card Updates
-  508 Compliant Options
-  Strong User Authentication
-  Streamlines Business Process

AuthentX™ Kiosk

Self-service is key to simplifying card management. With the AuthentX Kiosk, cardholders perform a number of card lifecycle management activities on their own. After a biometric check and cryptographic authentication cardholders may:

- ✓ Perform PIN reset, unlock card
- ✓ Import credentials to promote interoperability
- ✓ Activate credentials
- ✓ Perform post issuance updates
- ✓ Update personal information

Customer Satisfaction

No Lines

No Appointments

Efficient & Cost Effective

The self-service features enabled by the AuthentX Kiosk brings efficiency to the enrollment and maintenance process, reducing costs by minimizing the number of staff dedicated to supporting card functions. In high-traffic sites, the kiosk

eases congestion and keeps the burden of ID management where it should be: on the AuthentX IDMS.

The efficiency of the self-service kiosk extends beyond the enrollment office. As personnel spend less time standing in line, they have more time to devote to their job responsibilities.

By increasing efficiency and decreasing the number of personnel needed to support these applications, the AuthentX Kiosk provides cost savings for its users.

AuthentX™ Self Service Kiosk

Instinctive Interface

XTec's flexibility in configuration means that you determine where the kiosk should be placed to guarantee maximum use and convenience for your agency. The kiosk is also available in a version for cardholders covered by Section 508 of the Rehabilitation Act of 1973.

Modifications unique to Kiosk 508 include both Braille and verbal instructions for blind and visually impaired users. In addition, the original keypad is replaced by a 508 compliant PIN pad and function keys. The specially-designed biometric matching sensor works with our algorithms to relax the standard finger positioning and hold requirements, thus making kiosk use feasible for cardholders with unique needs.

Part of an Enterprise Solution

The AuthentX Kiosk is seamlessly integrated with other AuthentX products to allow for flexibility regarding physical and logical access control solutions. The AuthentX Kiosk has the ability to import cardholder information with their approval; streamlining the process of updating physical and logical access control systems. When used with the AuthentX Identity Management System (IDMS), the self service kiosks are able to provide basic card management activities including PIN Management. The AuthentX Kiosk employs the same level of security covered by the Federal Government for cryptographically sound and rapid electronic transactions. Authentication is a hallmark of all XTec products and, as such, provides strong authentication, ensuring the credential presented is:

- ✓ Valid (not expired or revoked)
- ✓ Genuine (credential/certificate match)
- ✓ Trusted (issued by a trusted provider)
- ✓ Belongs to individual presenting credential (biometric, unique ID verification)

The AuthentX suite of identity products:
